Hi Dayna,

Just realized you weren't copied on this chain. I wanted to share TPD's standard response on ivermectin in case we receive general inquiries.

Thanks!

Mimi

Subject: RE: URGENT: For Review - PA - Do not use ivermectin for treatment of COVID-19

Hey there Mimi, hey Aldege,

I just wanted to share the standard response that we have been sending Canadians who enquire about using Ivermectin for COVID-19 – it has information on the approved human uses.

I also want to flag that PHAC has prepared a scientific evidence brief on ivermectin, which is available upon request here: [Public Health Agency of Canada \(PHAC\) – Emerging Science Group \(ESG\) Evidence Reviews – CanCOVID](#), and the PAHC rapid communication on ivermectin for strongyloides infection in patients with COVID-19 ([ccdrv47i78a04-eng.pdf \(canada.ca\)](#))

Please let me know if you would like TPD to review additional versions of the PA, as I will coordinate here from DGO,

Thank you!

P

Subject: RE: URGENT: For Review - PA - Do not use ivermectin for treatment of COVID-19

Hi Aldege,

We have no reason to believe consumers have/are purchasing ivermectin for human use to treat COVID-19 as human use products require a prescription. Like the title, the messaging could be to not use any form of ivermectin to treat/prevent COVID-19. The US FDA article focuses on describing the ingredient general and then advising on how vet use products should not be used on humans.

I understand if CPAB needs to keep the focus on only Ivermectin vet products as per your process.

Will wait for TPD to chime in.

Thanks!

Mimi

Subject: RE: URGENT: For Review - PA - Do not use ivermectin for treatment of COVID-19

Hello All:

The US FDA and media articles are specifying veterinary version of ivermectin. Do we have reason to believe the human version is being used? I think we should keep it to the vet version but can add human version in advice to healthcare professionals.

Please advise ASAP as the PA needs to go out today.

Thanks.

Hi Aldege,

I'd added some initial comments as I feel the PA should be worded on ivermectin in general and not just that the vet version to treat COVID-19 is dangerous. I've added some preliminary thoughts.

Subject: RE: Issue IU - Do not use ivermectin for treatment of COVID-19

Importance: High

Thanks Aldege! My advice would be to issue a similar advisory as what the US FDA did. I've copied our TPD colleagues as they would be our experts on providing advice to the public.

@TPD ORMS: Sorry for not including you in the first outreach to CPAB. In light of the articles published (US FDA and CBC) regarding consumers purchasing ivermectin to treat COVID-19, our ADM is supportive of an advisory to be issued today/tomorrow to inform the Canadian public against this use. HC has not issued any statement related to this matter. Could you please provide advice to CPAB on what the public should be made aware of and what they should do? We'd likely what to advise: what is ivermectin authorized for?, it is not authorized to treat COVID-19 and shouldn't be used in this way, what are the risks and to consult HCPs should they be seeking treatment or have questions.

I have not looped in our colleagues from VDD despite it seem like consumers are seeking the veterinary form of ivermectin as we would like to communicate on human health risk.

Thank you!

Mimi

Subject: Issue IU - Do not use ivermectin for treatment of COVID-19
Importance: High

Good morning Aldege,

I hope you had a fantastic weekend!! I saw you're covering for Laura today hence reaching out.

There have been multiple media articles indicating consumers may be purchasing ivermectin (veterinary version) to treat COVID-19. Ivermectin, an antiparasitic agent, is not recommended for prophylaxis or treatment of coronavirus disease 2019 (COVID-19). The idea of using ivermectin to treat COVID-19 seems to have returned and be more apparent in West Coast Canada. In addition, MHPD STARS received multiple advertising complaints on this matter.

US FDA: advising against it's use <https://www.fda.gov/consumers/consumer-updates/why-you-should-not-use-ivermectin-treat-or-prevent-covid-19>

Recent CBC Article: <https://www.cbc.ca/news/canada/calgary/ivermectin-alberta-covid-1.6157200>

Our ADM is supportive of HC issuing an article (similar to US FDA) to advise against the use of ivermectin to treat COVID-19. We would like to seek CPAB's advise on issuing an IU on this matter.

Please advise,

Mimi

Rapid Increase in Ivermectin Prescriptions and Reports of Severe Illness Associated with Use of Products Containing Ivermectin to Prevent or Treat COVID-19

Summary

Ivermectin is a U.S. Food and Drug Administration (FDA)-approved prescription medication used to treat certain infections caused by internal and external parasites. When used as prescribed for approved indications, it is generally safe and well tolerated.

During the COVID-19 pandemic, ivermectin dispensing by retail pharmacies has increased, as has use of veterinary formulations available over the counter but not intended for human use. FDA has cautioned about the potential risks of use for prevention or treatment of COVID-19.

Ivermectin is not authorized or approved by FDA for prevention or treatment of COVID-19. The National Institutes of Health's (NIH) COVID-19 Treatment Guidelines Panel has also determined that there are currently insufficient data to recommend ivermectin for treatment of COVID-19. [ClinicalTrials.gov](https://clinicaltrials.gov) has listings of ongoing clinical trials that might provide more information about these hypothesized uses in the future.

Adverse effects associated with ivermectin misuse and overdose are increasing, as shown by a rise in calls to poison control centers reporting overdoses and more people experiencing adverse effects.

Background

The Centers for Disease Control and Prevention (CDC) confirmed with the American Association of Poison Control Centers (AAPCC) that human exposures and adverse effects associated with ivermectin reported to poison control centers have increased in 2021 compared to the pre-pandemic baseline. These reports include increased use of veterinary products not meant for human consumption.

Ivermectin is a medication that is approved by FDA in oral formulations to treat onchocerciasis (river blindness) and intestinal strongyloidiasis. Topical formulations are used to treat head lice and rosacea. Ivermectin is also used in veterinary applications to prevent or treat internal and external parasitic infections in animals. When used in appropriate doses for approved indications, ivermectin is generally well tolerated.

Clinical trials and observational studies to evaluate the use of ivermectin to prevent and treat COVID-19 in humans have yielded insufficient evidence for the NIH COVID-19 Treatment Guidelines Panel to recommend its use. Data from adequately sized, well-designed, and well-conducted clinical trials are needed to provide more specific, evidence-based guidance on the role of ivermectin in the treatment of COVID-19.

A recent study examining trends in ivermectin dispensing from outpatient retail pharmacies in the United States during the COVID-19 pandemic showed an increase from an average of 3,600 prescriptions per week at the pre-pandemic baseline (March 16, 2019–March 13, 2020) to a peak of 39,000 prescriptions in the week ending on January 8, 2021.¹ Since early July 2021, outpatient ivermectin dispensing has again begun to rapidly increase, reaching more than 88,000 prescriptions in the week ending August 13, 2021. This represents a 24-fold increase from the pre-pandemic baseline. (**Figure**)

Figure: Estimated number of outpatient ivermectin prescriptions dispensed from retail pharmacies — United States, March 16, 2019–August 13, 2021*

*Data are from the IQVIA National Prescription Audit Weekly (NPA Weekly) database. NPA Weekly collects data from a sample of approximately 48,900 U.S. retail pharmacies, representing 92% of all retail prescription activity. Ivermectin dispensed by mail order and long-term care pharmacies, prescriptions by veterinarians, and non-oral formulations were not included.

In 2021, poison control centers across the U.S. received a three-fold increase in the number of calls for human exposures to ivermectin in January 2021 compared to the pre-pandemic baseline.

In July 2021, ivermectin calls have continued to sharply increase, to a five-fold increase from baseline. These reports are also associated with increased frequency of adverse effects and emergency department/hospital visits.

In some cases, people have ingested ivermectin-containing products purchased without a prescription, including topical formulations and veterinary products. Veterinary formulations intended for use in large animals such as horses, sheep, and cattle (e.g., “sheep drench,” injection formulations, and “pour-on” products for cattle) can be highly concentrated and result in overdoses when used by humans. Animal products may also contain inactive ingredients that have not been evaluated for use in humans. People who take inappropriately high doses of ivermectin above FDA-recommended dosing may experience toxic effects.

Clinical effects of ivermectin overdose include gastrointestinal symptoms such as nausea, vomiting, and diarrhea. Overdoses are associated with hypotension and neurologic effects such as decreased consciousness, confusion, hallucinations, seizures, coma, and death. Ivermectin may potentiate the effects of other drugs that cause central nervous system depression such as benzodiazepines and barbiturates.

Examples of recent significant adverse effects reported to U.S. poison control centers include the following:

- An adult drank an injectable ivermectin formulation intended for use in cattle in an attempt to prevent COVID-19 infection. This patient presented to a hospital with confusion, drowsiness, visual hallucinations, tachypnea, and tremors. The patient recovered after being hospitalized for nine days.
- An adult patient presented with altered mental status after taking ivermectin tablets of unknown strength purchased on the internet. The patient reportedly took five tablets a day for five days to treat COVID-19. The patient was disoriented and had difficulty answering questions and following commands. Symptoms improved with discontinuation of ivermectin after hospital admission.

Recommendations for Clinicians and Public Health Practitioners

- Be aware that ivermectin is not currently authorized or approved by FDA for treatment of COVID-19. NIH has also determined that there are currently insufficient data to recommend ivermectin for treatment of COVID-19.
- Educate patients about the risks of using ivermectin without a prescription, or ingesting ivermectin formulations that are meant for external use or ivermectin-containing products formulated for veterinary use.
- Advise patients to immediately seek medical treatment if they have taken any ivermectin or ivermectin-containing products and are experiencing symptoms. Signs and symptoms of ivermectin toxicity include gastrointestinal effects (nausea, vomiting, abdominal pain, and diarrhea), headache, blurred vision, dizziness, tachycardia, hypotension, visual hallucinations, altered mental status, confusion, loss of coordination and balance, central nervous system depression, and seizures. Ivermectin may increase sedative effects of other medications such as benzodiazepines and barbiturates. Call the poison control center hotline (1-800-222-1222) for medical management advice.
- Educate patients and the public to get vaccinated against COVID-19. COVID-19 vaccination is safe and the most effective means to prevent infection and protect against severe disease and death from SARS-CoV-2, the virus that causes COVID-19, including the Delta variant.
- Educate patients and the public to use COVID-19 prevention measures including wearing masks in indoor public places, physical distancing by staying at least six feet from other people who don't live in the same household, avoiding crowds and poorly ventilated spaces, and frequent handwashing and use of hand sanitizer that contains at least 60 percent alcohol.

Recommendations for the Public

- Be aware that currently, ivermectin has not been proven as a way to prevent or treat COVID-19.
- Do not swallow ivermectin products that should be used on skin (e.g., lotions and creams) or are not meant for human use, such as veterinary ivermectin products.
- Seek immediate medical attention or call the poison control center hotline (1-800-222-1222) for advice if you have taken ivermectin or a product that contains ivermectin and are having symptoms. Signs and symptoms include gastrointestinal effects (nausea, vomiting, abdominal pain, and diarrhea), headache, blurred vision, dizziness, fast heart rate, and low blood pressure. Other severe nervous system effects have been reported, including tremors, seizures, hallucinations, confusion, loss of coordination and balance, decreased alertness, and coma.
- Get vaccinated against COVID-19. COVID-19 vaccination is approved by FDA and is the safest and most effective way to prevent getting sick and protect against severe disease and death from SARS-CoV-2, the virus that causes COVID-19, including the Delta variant.
- Protect yourself and others from getting sick with COVID-19. In addition to vaccination, wear masks in indoor public places, practice staying at least six feet from other people who don't live in your household, avoid crowds and poorly ventilated spaces, and wash your hands often or use hand sanitizer that has at least 60 percent alcohol.

FYI, not sure if Ivermectin is a drug or pesticide, remember there being debate about this product in the past, think drug won out in the end, but flagging simply that at least some people think it works against COVID symptoms. Not sure it is a major concern here.

Shawn

I stand corrected ☺. Starts taking Ivermectin.

Salima – given this is Ivermectin and Hydroxychloroquin (two drugs known to be linked to COVID-19). Let's include the steps below identified by Central in a heads up to DGO. Let's confirm if they have any concerns given these are highly controversial products.

Subject: RE: DIRECTOR Concurrence: CSF - Public Enquiry - Central - Sep 14, 2021

Hi Ranjeet,

As Bobbie stated below, ivermectin can be prescribed for human use for below indication. If they mention COVID-19 we can use wording from our recent advisory.

I would still recommend a call back while sticking to standard lines as part of the script.

Cheers,

Toufic

Subject: RE: DIRECTOR Concurrence: CSF - Public Enquiry - Central - Sep 14, 2021

According to the HC Advisory on Ivermectin:

"Ivermectin, a prescription drug product, is authorized for sale in Canada for the treatment of parasitic worm infections in humans, specifically intestinal strongyloidiasis and onchocerciasis, and should only be used for this purpose, under the supervision of a healthcare professional. A veterinary version of this medication is available to treat parasitic infections in animals. People should never use the veterinary version of this product."

For clarification, if the person would like to obtain for personal use, then it would require a prescription, therefore, the enquirer should be referred to contact the family physician or pharmacist for medical advice.

Our responses are fairly standard in terms of the regulatory requirements for commercial vs personal use.

Hey Toufic,

I seem unclear as to the second bullet highlighted in red. Personal supply for what? Not sure why we would refer them to a family physician or pharmacist for Ivermectin since we know that it should be

used in humans right?

[REDACTED]

With that lens how do you think your approach will change? Anything else we should be considering here?

Salima – I think we can still give an early heads up to DGO on this and let them know we are formulating a factual response back to the enquirer.

Let me know,

R

Subject: DIRECTOR Concurrence: CSF - Public Enquiry - Central - Sep 14, 2021

Hi Ranjeet,

Central received a public enquiry in the form of a voice mail message in the afternoon of Sep 14, 2021.

The enquirer asked how an individual can acquire Ivermectin and Hydroxychloroquine. The enquirer did not mention COVID in the message [REDACTED]

Central proposes to contact the caller back on Sep 15, 2021 and use the approach (below) to respond:

Ask enquirer whether the enquiry was about obtaining commercial supplies of the drugs for sale or distribution in Canada

Inform enquirer on licensing requirements of prescription drugs

If enquirer was interested in obtaining personal supply

Refer the enquirer to consult with the family physician or pharmacist

If the enquirer was interested in the two drug products as related to COVID-19:

Information in *Ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems* and the link below can be shared

[Ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems - Recalls and safety alerts \(healthycanadians.gc.ca\)](https://www.healthycanadians.gc.ca/ivermectin-not-authorized-to-prevent-or-treat-covid-19-may-cause-serious-health-problems-recalls-and-safety-alerts/healthycanadians.gc.ca)

I don't see anything wrong with the proposed approach above. It is factual, lines up with publicly available info and would show us as being responsive (getting back to them within a day). Only thing I find strange is this request given the timing of the recent ATI request on both Ivermectin and Hydroxychloroquine.

Any issues from your side Ranjeet to move ahead? I think this should def. be flagged to DGO as an FYI.

Cheers,

Toufic

<http://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>

Ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems

Health Canada has received concerning reports of the use of veterinary ivermectin to prevent or treat COVID-19. Canadians should never consume health products intended for animals because of the potential serious health dangers posed by them.

In this light, Health Canada is advising Canadians not to use either the veterinary or human drug versions of Ivermectin to prevent or treat COVID-19. There is no evidence that ivermectin in either formulation is safe or effective when used for those purposes. The human version of ivermectin is authorized for sale in Canada only for the treatment of parasitic worm infections in people.

You can report any suspected adverse reactions to drugs and other health products to the Canada Vigilance Program by

Hi CTU,

Can you please follow up with [REDACTED] regarding the complaint below (very bottom of email chain) to request additional information.

Specifically, can you please ask:

- Exact location of billboard sign
- Is the sign on public or private property
- Contact details for the rental company of the billboard sign
- Any information on who may have posted the sign

If you have any questions please let me know.

Thanks,
Dayna

Hi Ranjeet,

I wanted to give you an update on this case.

Requester agreed to
Remove 3rd Party Info

Current Status:

- Referral from MHPD on August 23, 2021 from the [REDACTED] regarding the advertising of a health product (Ivermectin) to the public for the treatment of COVID-19 (schedule A disease). The billboard is posted on a rural highway in Manitoba [REDACTED]
[REDACTED]
- Meeting on August 25, 2021 with MHPD, HPCEU and HPC-West to discuss the complaint. At this time there continue to many unknowns on the source of the billboard and any potential non-compliances. More information will be gathered ahead of finalising next steps.

Next Steps:

- CTU to contact [REDACTED] to gather additional details on the location of the billboard and contact details for the rental company of the billboard, for potential case creation. The contact will be initiated in the next day.
- HPCEU to flag to CPAB the potential of a PA (if needed) and to seek advice on communicating out during a caretaker government. To be initiated on August 25, 2021.

Please let me know if you have any questions and/or concerns.

Cheers,

Toufic

Sounds good.

As mentioned on teams, we will link up to MHPD to see if they can lead on an external comms on Ivermectin (we can feed into it).

We will also link up to West to discuss potential best paths forward on validating the below info. The issue for us is that MHPD has not and will not take action on [REDACTED] so it may be tough for an inspector to get traction on this case.

@ Dennis/Craig, copying you both to give you a heads up.

Cheers,

Toufic

[REDACTED] - Ivermectin signage concern [REDACTED] - August 24, 2021

*****Mary** for your weigh-in/concurrence on this what I'm dubbing as a Caretaker Sensitivity File (CSF) and possible next steps***

Hey Toufic in response to your email below I've reorganize your update with some additional info for Mary as well as some proposed next steps for consideration below **including** Health Canada being proactive and issuing a Public Advisory on Ivermectin similar to that which the FDA has already done.

- Ivermectin, a drug meant for livestock, is being touted as a treatment/prevention for COVID-19. The US FDA has already warned about not using this drug and the issue is already being heavily covered by the media (ex: CNN , Global News) .
- With this context MHPD (STARS) sent the complaint below (and see attachment) which we agree constitutes advertising of a health product to the public for the treatment of a Schedule A disease.
- The billboard reads: "Ivermectin Treats COVID-19." [REDACTED]
- [REDACTED]
- [REDACTED]
- MHPD wants ROEB to dispatch a regional inspector to determine the advertiser, via the billboard rental company and request required corrective actions.

Given:

- Ivermectin, is an authorized product (MHPD scope)
- [REDACTED] lists physicians/pharmacies that will prescribe Ivermectin for COVID
- [REDACTED]
- No information provided in picture of billboard rental company
- Obligation of billboard rental company to disclose rental information.
- If MHPD is not able to identify any non-compliances with [REDACTED] perhaps no action recommended

Considerations however:

- May be able to provide educational materials to the billboard rental company to identify the false/misleading advertising so they can remove the billboard if they can't share the renters name (and share the compliance information with the renter).
- If this a privately owned billboard on public property have someone (not sure if HPCRM CV) to identify to the city manager for removal given it is a false/misleading claim.
- We will want to consider a Public Advisory similar to the FDA's to show that Health Canada is being proactive on these issues. (Perhaps post before having the billboard taken down).

[REDACTED] - Ivermectin signage concern [REDACTED] - August 24, 2021

Hi Ranjeet,

I want to flag the below issue that was sent to us by MHPD (STARS). MHPD received the complaint below (and see attachment) and we believe it constitutes advertising of a health product to the public for the treatment of a Schedule A disease. Although the [REDACTED]

MHPD wants ROEB to dispatch a regional inspector to determine the advertiser, via the billboard rental company and request required corrective actions.

I am unsure about assigning this one, given the following considerations:

- Ivermectin, is an authorized product (MHPD scope)
- [REDACTED] lists physicians/pharmacies that will prescribe Ivermectin for COVID
- [REDACTED]
- No information provided in picture of billboard rental company
- Obligation of billboard rental company to disclose rental information?
- If MHPD is not able to identify any non-compliances with [REDACTED] then no action recommended

Anything else I am missing? Should we be looking at it from a different angle?

Let me know,

Toufic

signage concern [REDACTED]

Hello Toufic, Dayna, and Mimi,

I hope you are all excellent! We received the complaint below (and see attachment) and we believe it constitutes advertising of a health product to the public for the treatment of a Schedule A disease, in contravention of the *FOOD & Drugs Act*. [REDACTED]

As such, we propose as a course of action that the case be referred to ROEB for dispatching a regional inspector to determine the advertiser, probably via the billboard rental company and request required corrective actions.

Have a pleasant evening!

Subject: [REDACTED] - Ivermectin signage concern ([REDACTED])

Dear Dr. Stewart,

I am writing to you on behalf [REDACTED] regarding a concern that had been brought to our attention recently involving the advertisement of the use of Ivermectin in treating Covid-19.

[REDACTED] has recently received notification from two rural pharmacists about a sign along a rural highway in Manitoba that reads "Ivermectin treats COVID-19 [REDACTED] I have attached a picture for your review as well. These pharmacists have expressed great concern about this apparent misinformation, placed in a region with extremely poor/low vaccination uptake, combined with the potentially lower educational levels of some residents of the particular area.

[REDACTED] The information was originally shared with the provincial College of Physicians and Surgeons of Manitoba (CPSM) for their review and considerations for further action. Unfortunately, none of the HCPs fall under the jurisdiction of the CPSM [REDACTED]

The TPD may already be aware of this inaccurate/non-compliant advertising, and I'm forwarding to you for your consideration on how best to address and manage. Perhaps the TPD may consider direct communication [REDACTED] to remove all non-compliant advertisements regarding Ivermectin use in Covid-19. Is there anything further that the TPD

Requester agreed to
Remove 3rd Party Info

can do about this advertising considering this drug is not approved for use in Covid-19 in Canada?

For your reference, I have also brought this to the attention of our provincial Vaccine Implementation Task Force (VITF) Medical Team Leads for their consideration of addressing provincially as well.

[REDACTED]

I look forward to hearing from you.

Kind regards,

[REDACTED]

Subject: ivermectin

Hi Heather,

Just a heads up that Manon will be sending the AsDM an email update on ivermectin (current status and next steps). It contains some information Jenny sent re: a billboard in Manitoba advertising ivermectin as a treatment for COVID. She'll cc Stefania on the email since it mention ROEB working with HPFB on the issue. Thanks and have a great weekend,

Tamy

Subject: Ivermectin referral

Hi All,

Steph at MHPD STARS provided me a heads-up that she's working on a summary of recent ivermectin advertising complaints that include a couple of billboard advertisements. She anticipates having this completed for Alain by tomorrow. She asked us to hold off on following up with the complainant as Alain should be reaching out to us afterwards and likely retracting this referral.

More to come.

Mimi

Dear Veterinarian,

Health Canada is aware that members of the public have contacted veterinarians to purchase ivermectin labelled for veterinary use to treat or prevent COVID-19 in humans.

On August 31, Health Canada issued a public advisory to inform Canadians and health professionals of the risks associated with the unauthorized use of veterinary or human drug versions of ivermectin to prevent or treat COVID-19. The Canadian Veterinary Medical Association (CVMA) has shared this [public advisory](#) with you.

Currently, there is no evidence that human or veterinary ivermectin is safe or effective when used to prevent or treat COVID-19. Ivermectin labelled for human use is authorized for sale in Canada only for the treatment of parasitic worm infections. Veterinary ivermectin may be highly concentrated for use in large animals and can be dangerous for humans. It may cause serious health problems such as vomiting, diarrhea, low blood pressure, allergic reactions, dizziness, seizures, coma and even death.

We are asking for your help to share information about these potentially serious health risks and referring individuals to Health Canada's advisory. Veterinarians should also encourage the public to contact their health care professional for advice on how to prevent and treat COVID-19.

Please do not hesitate to contact the Veterinary Drugs Directorate at vdd.vetdrugs-medsvet.dmv@hc-sc.gc.ca if you have questions.

Sincerely,

Marilena Bassi
Director General
Veterinary Drugs Directorate

Subject: FW: Ivermectin update

Harpreet, since my note of yesterday evening, there have been some developments on this file. A summary is provided below. I added Stefania to this distribution list given ROEB's involvement.

Updates:

- CFIA and VDD met with the CCVO today. Most members advised that they already shared HC's PA with their networks which includes vets, retail, and Ministries of Health. The PA has also been posted in some outlets and the content has been used extensively by P/Ts in their own communications.
- As of September 2, there have been 10,000 pageviews of the PA and the tweet has been retweeted 1100 times and has almost 1600 Likes indicating that the message is being seen and shared.
- CFIA confirmed they have retweeted HC's message.

Next steps:

- Week of Sept 6, CVMA will be sending a letter (see attached - authored by HC) to their members regarding the risks of ivermectin use, and include information about the PA in their e-newsletter.
- Week of Sept 6, the CCVOs will share with CFIA/VDD their communications materials and will seek HC's input as needed.
- In response to Ivermectin being advertised as a treatment/prevention for COVID-19 on a billboard in Manitoba, ROEB is working with HPFB to send a regulatory letter to the advertiser to direct that all non-compliant signage be removed. Additional action will be taken should the advertiser not comply.
- CPAB is continuing to work on a robust social media plan on this issue.
- CPAB is engaging with the FPT Public Health Network Comms Working Group to possibly put this item on their next weekly meeting (Wednesday September 8th) for additional P/T engagement and amplifying of messages.
- MHPD is continuing to monitor this issue, including scanning literature, requesting data from Canadian Poison Control Centres and monitoring the Canada Vigilance database, to inform additional measures as required.

Any questions, please let us know. Thanks

Subject: Ivermectin update

Bonsoir Harpreet, here is a summary of the outreach undertaken since the release of the public advisory on Ivermectin, and proposed next steps to further amplify our message.

Actions to date:

- Upon release of the PA on Aug 31, a targeted email was sent to key vet health professional organizations/partners to make them aware and solicit their assistance in maximizing the outreach on this issue. The list of recipients included several producer associations, the chief vet officers across the country, the PT registrars, the CVMA, NAPRA, and 2 main industry associations.
- The PA was also distributed via our medeffect list serve - which goes out to over 29,000 subscribers. It was picked up by Ottawa Public Health - <https://mobile.twitter.com/OttawaHealth/status/1432854427652743168>
- CFIA was also informed and asked to distribute the PA to their stakeholders.
- Meeting was held today between CPAB and HFPB to discuss additional outreach measures that could be taken.

Next steps:

- Further tailored outreach is being considered, including to Livestock Medicine Outlets and those most likely to be buying ivermectin.
- CPAB is developing social media messages on this issue.
- In collaboration with CFIA, engage P/Ts to explore on measures that they could take to manage the sale of veterinary ivermectin. A meeting with the Council of Chief Veterinary Officers (CCVO) is scheduled for tomorrow.
- CFIA is exploring options to amplify HC's message with their stakeholders.
- VDD will connect with CVMA tomorrow regarding a letter (authored by HC) to send to CVMA members regarding the risks of ivermectin use.
- MHPD will reach out to poison control centres to see if they have received any reports related to use of ivermectin to treat or prevent COVID-19. This will help inform additional measures, as required.

Please let me know if you have any questions or wish to discuss. Thanks.

Manon Bombardier

221		Medical Device	Yes	website	Protecting ourselves from the coronavirus is essential, but it comes at a cost. It's difficult enough to convey messages to people you're talking to in person. Speaking to them on your smartphone through a mask ends up being a muffled mess! Do you even want to expose your phone to potentially infective airborne particles? Things might be different if you could drop your phone in a bucket of sanitizer once you get home. As things stand now, however, we need a more practical alternative is the answer. It's the perfect synergy of smart device and high-level protection. We'd say it will leave you breathless, but that's not accurate. The very breathable fabric provides a barely-there feel, making it simple to complete your everyday tasks.	Ongoing

	Instrument médical	Oui	site Web	Se protéger contre le coronavirus est essentiel, mais cela a un coût. Il est déjà assez difficile de transmettre des messages à ses interlocuteurs en personne. Leur parler sur votre téléphone intelligent à travers un masque finit par être un vrai calvaire! Voulez-vous réellement exposer votre téléphone à des particules potentiellement infectieuses en suspension dans l'air? Les choses pourraient être différentes si vous pouviez jeter votre téléphone dans un seau de désinfectant une fois rentré chez vous. Cependant, dans la situation actuelle, nous avons besoin d'une option plus pratique. . C'est la synergie parfaite entre un appareil intelligent et une protection de haut niveau. On pourrait dire qu'il vous coupera le souffle, mais ce n'est pas le cas. Le tissu très perméable à l'air offre une sensation de légèreté, ce qui facilite la réalisation de vos tâches quotidiennes. 				Nos masques comprennent un filtre lavable et perméable à l'air avec une EFB ≥ 95 % et une EFP ≥ 85 % confirmées en laboratoire. Constitués de 3 couches de polypropylène non tissé et d'un filtrage fondu soufflé, ils offrent une meilleure protection que les masques en tissu seulement. Nos masques sont aussi traités avec une solution antimicrobienne à base d'ions d'argent qui prévient la croissance bactérienne et qui est certifiée non toxique par l'association [REDACTED]	
Masques faciaux et filtres pour l'extérieur [REDACTED]	Instrument médical	Oui	[REDACTED] site Web	Grâce à nous, il est plus facile que jamais d'avoir du plaisir de façon sécuritaire et responsable sur vos pistes préférées. FAITES LE PLEIN DES PRODUITS PROTECTIVE ESSENTIALS RECOMMANDÉS POUR ASSURER VOTRE SÉCURITÉ. Les masques en tissu que nous portons sont importants pour aider à prévenir la propagation	Situation résolue
Requester agreed to Remove 3rd Party Info					
				Lorsqu'ils sont portés ensemble, nos masques et filtres confèrent une protection contre les virus supérieure aux normes des tests. Dès les premiers jours de la pandémie mondiale, nous avons vu l'importance d'aider.

Subject: Media Monitoring for Sept 3: P.E.I. feed mills getting requests for ivermectin for COVID-19

Hi Thivya,

FYI...in case anyone might've thought it was in Alberta only 😊

'It's extremely dangerous': P.E.I. feed mills getting requests for ivermectin for COVID-19
CBC News (Kevin Yarr)

According to CBC News, some P.E.I. vendors of veterinary medicines have been receiving inquiries from people looking to buy **ivermectin**, following misinformation spreading on social media that it can be used to treat COVID-19. CBC News has spoken with three companies that have received unusual requests for the drug. "**It's extremely dangerous**," Mary Van Den Broek-Grant, manager of the Cardigan Feed Mill, told Island Morning host Laura Chapin. "I am shocked about the whole thing." Ivermectin is a **deworming medicine** for livestock. Some trials were run for the drugs anti-viral properties, but reviews found no evidence the drug was effective. As formulated for animals, it is potentially dangerous because it is dosed for **much larger animals than humans**. It can cause vomiting, diarrhea, low blood pressure, allergic reactions, dizziness, seizures, coma and even death. **Health Canada** and the **U.S. Food and Drug Administration** have warned people off using the drug. Van Den Broek-Grant said the misinformation is a sign that the public needs better science education.

I spared you some of the media reports from Thursday (much of the same as Wed), but thought I'd share this one

Have a great long weekend!
Rosalee

Subject: RE: Biweekly Meeting - Health Canada [REDACTED]

Hi Toufic,

Please see below for updates on items discussed during the meeting held on 2021-05-20:

UV lights/wands PA update

- ROEB ADMO had questions, so updates are still on hold

Lind Equipment UV products

- Case referred to ROEB's Pesticide Compliance Program (PCP) for potential C&E action as these products are regulated as pesticides under the *Pest Control Products Act* (PCPA) and Regulations

Non-medical and medical face masks conflicting messaging

- MHPD received proposed revised text from MDD
 - PHAC may consider modifying messaging on their website so that HC and PHAC messaging/positions align
- Update to be provided at next meeting

Requester agreed to
Remove 3rd Party Info

- [REDACTED]
 - Some claims removed while others remain on Facebook
 - Will not take additional enforcement action
- Item to be removed from future agendas

Horse ivermectin

- IQVIA ran a targeted search and returned 37 links
 - MHPD identified one link of concern which could be a potential case
- Update to be provided at next meeting

[REDACTED] annual bilat debrief

- Alain really appreciated the presentations
- First time bilat was held virtually and was a success
 - Also first time involving interdepartmental participation
- Proactive monitoring work is "frontline" work
 - Allows us to insert ourselves between the unauthorized claims being made online and consumers who may be considering purchasing these products

ATIA-16(2)(c)

ATIA - 19(1)

social media posts

- Started posting based on discussions with HC

Please let me know if you have any questions.

Thanks,

Zach

Hi Dayna,

Hope you had a great weekend! Did Chris ever reach out to Laura on this risk comms? Looks like CBC has picked it up. Please see below. Are you able to connect with Laura to confirm path on this?

Cheers,

Toufic

Hey,

Thanks for the draft Mimi. Revised the response a bit based on a previous response for a similar question.

Celina – let me know your preference and if you want me to send up.

Thanks,
Dayna

Proposed revised draft:

It is prohibited in Canada to sell or advertise a drug in a false, misleading or deceptive manner and would be a contravention of the *Food and Drugs Act*.

Drugs are regulated under the *Food and Drugs Act* and associated Regulations. Fines and penalties for convictions related to contraventions of this Act and its regulations are described under Section 31 of the *Food and Drugs Act*. Health Canada may also refer charges under the *Food and Drugs Act* to the Public Prosecution Service of Canada (PPSC) for potential prosecution. The courts have the sole discretion to impose penalties.

The primary objective of Health Canada's compliance and enforcement approach is to manage the risks to Canadians using the most appropriate level of intervention. When Health Canada identifies or is notified of potential non-compliance with the *Food and Drugs Act* or its Regulations, it takes steps to verify that non-compliance has occurred and takes action based on the risk to the health of Canadians. A number of compliance and enforcement options are available to correct non-compliance or mitigate a risk to Canadians, including, for example, issuing public communications, product recalls, product seizures and referrals to the Public Prosecution Service of Canada for potential prosecution.

The Department encourages anyone who has information regarding the potential sale or advertising of any non-compliant health product to report it using the [online complaint form](#).

Subject: RE: DGO to OPRAA please: For MHPD and HPCD input: Media Query: Follow-up: Winnipeg Free Press [REDACTED] Regulations of agricultural ivermectin

Morning Ladies,

Please see draft response below.

Q5. And can businesses be fined for selling ivermectin if they know it won't be used for its intended purpose? (HPCD)

It is prohibited in Canada to sell or advertise a drug in a false, misleading or deceptive manner as per section 9(1) of the *Food and Drugs Act* (FDA) which states:

9 (1) No person shall label, package, treat, process, sell or advertise any drug in a manner that is false, misleading or deceptive or is likely to create an erroneous impression regarding its character, value, quantity, composition, merit or safety.

Health Canada can refer cases under the FDA to the Public Prosecution Service of Canada for potential prosecution. The courts have the sole discretion to impose fines. The primary objective of Health Canada's compliance and enforcement approach is to manage the risks to Canadians using the most appropriate level of intervention.

Thanks!

Mimi

Hi MHPD,

As expected the reporter is asking for more details on the case in Manitoba.

Rong- you said that in this case, it was a third party we were dealing with, not the company/group that paid for the ad. At this point we have not released this information, given it was a third party. Can we put that as a response?

Carole – I believe Q5 falls under HPCD.

Input by noon on Monday would be greatly appreciated.

Anne

Media/Reporter: Winnipeg Free Press [REDACTED]

Deadline to reporter: September 27

Impact: MEDIUM (2)

Complexity: MEDIUM (2)

Background: X

Questions and answers:

Q1. Do you have more information on the false advertising in Manitoba?

Q2. How many billboards were there and where were they located?

Q3. Were they claiming ivermectin cures COVID-19?

Q4. Was the company fined?

Q5. And can businesses be fined for selling ivermectin if they know it won't be used for its intended purpose? (HPCD)

Response previously provided:

Q1. Does Health Canada have any power to make sure agricultural ivermectin isn't being sold for anything other than its intended use?

One of Health Canada's roles, as the federal regulator, is the approval of veterinary drug products. The Department helps ensure that all veterinary drugs fully satisfy requirements under the Food and Drug Regulations before they can be marketed. Health Canada is also responsible for compliance monitoring and enforcement activities related to veterinary drugs in Canada, including verifying that they are marketed in a manner that is consistent with their terms of market authorization and federal legislation and are not advertised in a false, misleading or deceptive manner. Depending on the province or territory where the drugs are sold, there may be restrictions on who is permitted to purchase products intended for use in livestock. Health Canada does not have jurisdiction over how a product is ultimately used.

Following reports of the use of veterinary ivermectin drugs outside of approved directions for use (off-label use), Health Canada issued a public advisory to inform Canadians that Ivermectin is not authorized to prevent or treat COVID-19 and may pose serious health risks: <https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>

Q2. Is the agency aware of instances of Canadian sellers marketing and selling ivermectin as a treatment for COVID-19?

Health Canada became aware of billboard advertising of Ivermectin for the treatment of COVID-19 in Manitoba this past summer. Upon Health Canada's request, the company displaying these ads removed them immediately, confirmed that these ads were no longer being displayed and committed to refraining from engaging in this non-compliant act in the future.

When Health Canada identifies or is notified of potential non-compliance with the *Food and Drugs Act* or its Regulations, it takes steps to verify that non-compliance has occurred. Incidents of non-compliance are prioritised and action is taken based on the risk they may pose to the general public. It is the responsibility of companies to comply with regulatory requirements and to investigate incidents of potential non-compliance, take appropriate action to correct non-compliance, mitigate any risk to health, and inform Health Canada as appropriate.

To report marketing that is false or misleading or does not meet regulatory requirements, visit <https://www.canada.ca/en/health-canada/services/drugs-health-products/marketing-drugs-devices/illegal-marketing/complaint.html>.

As part of its ongoing commitment to openness and transparency, Health Canada posts a [summary of health product advertising complaints](#) as well as [health product advertising incidents related to COVID-19](#) addressed by the Department. This case is expected to be posted online in the coming weeks.

[REDACTED] - Ivermectin signage concern [REDACTED] - August 24, 2021

Sounds good.

As mentioned on teams, we will link up to MHPD to see if they can lead on an external comms on Ivermectin (we can feed into it).

We will also link up to West to discuss potential best paths forward on validating the below info. The issue for us is that MHPD has not and will not take action on the [REDACTED] so it may be tough for an inspector to get traction on this case.

@ Dennis/Craig, copying you both to give you a heads up.

Cheers,

Toufic

[REDACTED] - Ivermectin signage concern [REDACTED] - August 24, 2021

*****Mary** for your weigh-in/concurrence on this what I'm dubbing as a Caretaker Sensitivity File (CSF) and possible next steps***

Hey Toufic in response to your email below I've reorganize your update with some additional info for Mary as well as some proposed next steps for consideration below **including** Health Canada being proactive and issuing a Public Advisory on Ivermectin similar to that which the FDA has already done.

- Ivermectin, a drug meant for livestock, is being touted as a treatment/prevention for COVID-19. The US FDA has already warned about not using this drug and the issue is already being heavily covered by the media (ex: CNN , Global News) .
- With this context MHPD (STARS) sent the complaint below (and see attachment) which we agree constitutes advertising of a health product to the public for the treatment of a Schedule A disease.
- The billboard reads: "Ivermectin Treats COVID-19." [REDACTED]
- Although the [REDACTED] is mentioned for more information, MHPD has not been able to establish that the billboard is associated with [REDACTED]
- Furthermore [REDACTED]
- MHPD wants ROEB to dispatch a regional inspector to determine the advertiser, via the billboard rental company and request required corrective actions.

Given:

- Ivermectin, is an authorized product (MHPD scope)
- [REDACTED] lists physicians/pharmacies that will prescribe Ivermectin for COVID

Requester agreed to
Remove 3rd Party Info

- No evidence that billboard was posted [REDACTED]
- No information provided in picture of billboard rental company
- Obligation of billboard rental company to disclose rental information.
- If MHPD is not able to identify any non-compliances [REDACTED] perhaps no action recommended

Considerations however:

- May be able to provide educational materials to the billboard rental company to identify the false/misleading advertising so they can remove the billboard if they can't share the renters name (and share the compliance information with the renter).
- If this a privately owned billboard on public property have someone (not sure if HPCRM CV) to identify to the city manager for removal given it is a false/misleading claim.
- We will want to consider a Public Advisory similar to the FDA's to show that Health Canada is being proactive on these issues. (Perhaps post before having the billboard taken down).

Subject: For Director's Office Input: OPRAA for action due ASAP: [REDACTED]
- Ivermectin signage concern [REDACTED] - August 24, 2021

Hi Ranjeet,

I want to flag the below issue that was sent to us by MHPD (STARS). MHPD received the complaint below (and see attachment) and we believe it constitutes advertising of a health product to the public for the treatment of a Schedule A disease. Although [REDACTED] is mentioned for more information, they cannot establish that the billboard is associated with [REDACTED]

MHPD wants ROEB to dispatch a regional inspector to determine the advertiser, via the billboard rental company and request required corrective actions.

I am unsure about assigning this one, given the following considerations:

- Ivermectin, is an authorized product (MHPD scope)
- [REDACTED] lists physicians/pharmacies that will prescribe Ivermectin for COVID
- No evidence that billboard was posted [REDACTED]
- No information provided in picture of billboard rental company
- Obligation of billboard rental company to disclose rental information?
- If MHPD is not able to identify any non-compliances with [REDACTED] then no action recommended

Anything else I am missing? Should we be looking at it from a different angle?

Let me know,

Toufic

Subject: [REDACTED] - Ivermectin signage concern [REDACTED]

Dear Dr. Stewart,

I am writing to you on behalf of the [REDACTED] regarding a concern that had been brought to our attention recently involving the advertisement of the use of Ivermectin in treating Covid-19.

[REDACTED] has recently received notification from two rural pharmacists about a sign along a rural highway in Manitoba that reads "Ivermectin treats COVID-19 [REDACTED]". I have attached a picture for your review as well. These pharmacists have expressed great concern about this apparent misinformation, placed in a region with extremely poor/low vaccination uptake, combined with the potentially lower educational levels of some residents of the particular area.

In my initial review of the website [REDACTED]

[REDACTED] The information was originally shared with the provincial College of Physicians and Surgeons of Manitoba (CPSM) for their review and considerations for further action. Unfortunately, none of the HCPs fall under the jurisdiction of the CPSM [REDACTED]

The TPD may already be aware of this inaccurate/non-compliant advertising, and I'm forwarding to you for your consideration on how best to address and manage. Perhaps the TPD may consider direct communication to the [REDACTED] to remove all non-compliant advertisements regarding Ivermectin use in Covid-19. Is there anything further that the TPD can do about this advertising considering this drug is not approved for use in Covid-19 in Canada?

For your reference, I have also brought this to the attention of our provincial Vaccine Implementation Task Force (VITF) Medical Team Leads for their consideration of addressing provincially as well.

[REDACTED] is very open to any direction you may wish to provide on this, and would be agreeable to any further discussions as well. Please feel welcome to contact me should you wish to discuss further and I will ensure arrangements are made.

I look forward to hearing from you.

Kind regards,

Good morning

ADMO confirmed no concerns with responding to the caller and recommends proceeding with the call back as planned and any necessary follow-up action.

Please send a brief summary up of the call once completed in light of the recent media attention .

Thanks,
Salima

Hi Ranjeet,

As Bobbie stated below, ivermectin can be prescribed for human use for below indication. If they mention COVID-19 we can use wording from our recent advisory.

I would still recommend a call back while sticking to standard lines as part of the script.

Cheers,

Toufic

Subject: RE: DIRECTOR Concurrence: CSF - Public Enquiry - Central - Sep 14, 2021

According to the HC Advisory on Ivermectin:

"Ivermectin, a prescription drug product, is authorized for sale in Canada for the treatment of parasitic worm infections in humans, specifically intestinal strongyloidiasis and onchocerciasis, and should only be used for this purpose, under the supervision of a healthcare professional. A veterinary version of this medication is available to treat parasitic infections in animals. People should never use the veterinary version of this product."

For clarification, if the person would like to obtain for personal use, then it would require a prescription, therefore, the enquirer should be referred to contact the family physician or pharmacist for medical advice.

Our responses are fairly standard in terms of the regulatory requirements for commercial vs personal use.

Bobbie

Importance: High

Hey Toufic,

I seem unclear as to the second bullet highlighted in red. Personal supply for what? Not sure why we would refer them to a family physician or pharmacist for Ivermectin since we know that it should be used in humans right?

[REDACTED]

With that lens how do you think your approach will change? Anything else we should be considering here?

Salima – I think we can still give an early heads up to DGO on this and let them know we are formulating a factual response back to the enquirer.

Let me know,

R

ATIA - 19(1)

ATIA - 21(1)(a)

(HC/SC) <bobbie.chiu@hc-sc.gc.ca>

Subject: DIRECTOR Concurrence: CSF - Public Enquiry - Central - Sep 14, 2021

Hi Ranjeet,

Central received a public enquiry in the form of a voice mail message in the afternoon of Sep 14, 2021.

The enquirer asked how an individual can acquire Ivermectin and Hydroxychloroquine. The enquirer did not mention COVID in the message [REDACTED]

Central proposes to contact the caller back on Sep 15, 2021 and use the approach (below) to respond:

- Ask enquirer whether the enquiry was about obtaining commercial supplies of the drugs for sale or distribution in Canada
 - Inform enquirer on licensing requirements of prescription drugs
- If enquirer was interested in obtaining personal supply
 - Refer the enquirer to consult with the family physician or pharmacist
- If the enquirer was interested in the two drug products as related to COVID-19:
 - Information in *Ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems* and the link below can be shared
 - Ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems - Recalls and safety alerts (healthycanadians.gc.ca)

I don't see anything wrong with the proposed approach above. It is factual, lines up with publicly available info and would show us as being responsive (getting back to them within a day). Only thing I find strange is this request given the timing of the recent ATI request on both Ivermectin and Hydroxychloroquine.

Any issues from your side Ranjeet to move ahead? I think this should def. be flagged to DGO as an FYI.

Cheers,

Toufic

Subject: RE: DIRECTOR Concurrence: Update on Ivermectin Signage in MB (September 23, 2021)

Bonjour Alain,

With regards to the ivermectin sign issue, our standard process is that if a company provides written confirmation that a non-compliance has been addressed and there is no evidence to indicate otherwise we accept the company's confirmation. At this time we believe that the written confirmation provided by the company is sufficient. With that being said, we know there are sensitivities specific to COVID surrounding this file, therefore should there be new information or concern that the company is continuing non-compliant advertising, please do let us know and we will take action as deemed necessary.

For the NHP proactive monitoring options analysis we've had internal discussions and are working on finalizing the document which will hope to share with your group soon.

Thank you,
Celina

Bon retour Celina,

[REDACTED] Thanks for the response, I also have another item to discuss with you 2.

In terms of Ivermectin, I would like to clarify that MHPD did not confirm that the billboard has been removed. The company claimed that it was removed but we have no evidence of that, that's why we are seeking ROEB's help to confirm. Our DG asked us to confirm with you that it has been removed. However, if it is ROEB's position that a follow up by you is not necessary, we'll brief up and close the case.

On another note, I presume you were briefed on an NHP advertising proactive monitoring initiative launched by MHPD. Further to a meeting at director level, it was suggested that HPCD would start drafting a document presenting 3 options for streamlining the handling of the advertising incidents detected, especially those involving unauthorized products.

My team would then provide input and the 2 teams would work together to finalize it. To my knowledge, HPCD has not yet sent us this document. We were supposed to present the document to the 2 directors by the beginning of September 2021. Please look into this, although I am sure you are extremely busy catching up.

Bonjour Alain,

[REDACTED]
[REDACTED] Toufic and I are transitioning at the moment, but please feel free to reach out to me and Dayna for any issues needing HPCE's involvement from now on.

We have reviewed the information you provided and your request for an in person confirmation of the removal of the billboard.

Given that MHPD confirmed that the billboard has been removed and associated non-compliant advertising has been addressed, ROEB doesn't believe that an additional in person verification is necessary.

Of course, should there be new information or concern that the company is continuing non-compliant advertising, we trust that MHPD will inform us and we will take action as appropriate.

Have a great day!

Thank you,
Celina

Subject: DIRECTOR Concurrence: Update on Ivermectin Signage in MB (September 23, 2021)

Hi Ranjeet,

As discussed at look-ahead, please find an update below on the ivermectin signage issues being dealt with by MHPD.

Current Status:

- At the end of August of 2021, MHPD received a complaint [REDACTED] regarding a billboard advertising Ivermectin treating COVID in Manitoba.
- MHPD contacted the sign company and have received confirmation that the signs have been removed.
 - The letter sent by MHPD to Magnetsigns referenced the 3 locations (Winkler, [REDACTED] identified in the complaints they received, this includes the location referenced from [REDACTED] which was the file we had previously discussed with them.

Requester agreed to
Remove 3rd Party Info

- A Public Advisory has been posted warning Canadians that Ivermectin is not authorized to prevent or treat COVID-19 (<https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>)

MHPD has requested that ROEB drives to the location of the signage (Wrinkler, Manitoba) to further confirm that it has indeed been removed.

HPCE Recommendation:

Based on the fact that the signage company has provided confirmation that all signage has been removed and the location of the sign of concern is about 1.5 hrs away from an inspector, we do not think this is necessary to provide this visual confirmation that MHPD is requesting. Please let me know if you concur with this approach.

Cheers,

Toufic

Hi Celina,

Received the email below from Alain (MHPD STARS) regarding a complaint [REDACTED]
[REDACTED] they received for billboards advertising Ivermectin treating COVID in Manitoba. MHPD contacted the sign company and have received confirmation that the signs have been removed, however, MHPD is now requesting that ROEB drive to the location of where the sign was posted to confirm it has indeed been removed.

Based on the company's confirmation, I'm not sure it is necessary to send an inspector out to confirm, however, I understand there are some sensitivities regarding this product. I did speak with Ian and he said they could drive out to the location if required, however, we wanted to check in with management on the expectation of ROEB confirming compliance that was requested by MHPD.

I've also attached a previous thread that was briefed up for additional context.

Please let me know if you'd like to discuss.

Thanks,
Dayna

Subject: CSF Update - Public Enquiry - Central - Sep 15, 2021

Hello,

Enquirer [REDACTED]

Summary of the Outcome:

- Central inspector contacted [REDACTED] on Sep 15 by telephone and confirmed she heard the two drug products (Ivermectin and Hydrochloroquine) could be acquired in Canada for personal use

- [REDACTED] confirmed she lives in USA
- Inspector confirmed Canadian residents would need to consult with their physicians to obtain the products in Canada as they are both classified as prescription drugs
- [REDACTED] confirmed the advice and information from the USFDA for both products will be sought
- The caller appeared to be satisfied with the information provided and did not request for other information
- No further follow-up necessary at this time, the enquiry is considered closed

Regards,
Bobbie

Good morning

ADMO confirmed no concerns with responding to the caller and recommends proceeding with the call back as planned and any necessary follow-up action.

Please send a brief summary up of the call once completed in light of the recent media attention .

Thanks,
Salima

Hi Ranjeet,

As Bobbie stated below, ivermectin can be prescribed for human use for below indication. If they mention COVID-19 we can use wording from our recent advisory.

I would still recommend a call back while sticking to standard lines as part of the script.

Cheers,

Toufic

Subject: RE: DIRECTOR Concurrence: CSF - Public Enquiry - Central - Sep 14, 2021

According to the HC Advisory on Ivermectin:

"Ivermectin, a prescription drug product, is authorized for sale in Canada for the treatment of parasitic worm infections in humans, specifically intestinal strongyloidiasis and onchocerciasis, and should only be used for this purpose, under the supervision of a healthcare professional. A veterinary version of this medication is available to treat parasitic infections in animals. People should never use the veterinary version of this product."

For clarification, if the person would like to obtain for personal use, then it would require a prescription, therefore, the enquirer should be referred to contact the family physician or pharmacist for medical advice.

Our responses are fairly standard in terms of the regulatory requirements for commercial vs personal use.

Bobbie

Importance: High

Hey Toufic,

I seem unclear as to the second bullet highlighted in red. Personal supply for what? Not sure why we would refer them to a family physician or pharmacist for Ivermectin since we know that it should be

ATIA - 19(1)

ATIA - 21(1)(a)

used in humans right?

[REDACTED]

looking to see how Health Canada approach's this.

With that lens how do you think your approach will change? Anything else we should be considering here?

Salima – I think we can still give an early heads up to DGO on this and let them know we are formulating a factual response back to the enquirer.

Let me know,

R

Subject: DIRECTOR Concurrence: CSF - Public Enquiry - Central - Sep 14, 2021

Hi Ranjeet,

Central received a public enquiry in the form of a voice mail message in the afternoon of Sep 14, 2021.

The enquirer asked how an individual can acquire Ivermectin and Hydroxychloroquine. The enquirer did not mention COVID in the message [REDACTED]

Central proposes to contact the caller back on Sep 15, 2021 and use the approach (below) to respond:

- Ask enquirer whether the enquiry was about obtaining commercial supplies of the drugs for sale or distribution in Canada
 - Inform enquirer on licensing requirements of prescription drugs
- If enquirer was interested in obtaining personal supply
 - Refer the enquirer to consult with the family physician or pharmacist
- If the enquirer was interested in the two drug products as related to COVID-19:
 - Information in *Ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems* and the link below can be shared
 - *Ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems - Recalls and safety alerts* (healthy.canadians.gc.ca)

I don't see anything wrong with the proposed approach above. It is factual, lines up with publicly available info and would show us as being responsive (getting back to them within a day). Only thing I find strange is this request given the timing of the recent ATI request on both Ivermectin and Hydroxychloroquine.

Any issues from your side Ranjeet to move ahead? I think this should def. be flagged to DGO as an FYI.

Cheers,

Toufic

Subject: RE: Due @ 1 today: For HPCD input: Media Query: Winnipeg Free Press ([REDACTED]) Regulations of agricultural ivermectin

Hi Celina and Dayna,

For Q1, is it being led by VDD as I would say it relates to the licensing/classification aspect of ivermectin for veterinary use?

Q1. Does Health Canada have any power to make sure agricultural ivermectin isn't being sold for anything other than its intended use?

Health Canada's mandate does not include regulating decisions regarding the choice and administration of a health product by/to a patient. While Health Canada oversees the regulation of drugs, it has no jurisdiction over how health care professionals prescribe drugs once they are approved nor how consumers choose to consume the drug outside of approved directions for use.

- I did not include aspects re: practice of medicine when discussing off-label use above as the issue is related to consumers purchasing products off the shelf and consuming it off-label.

Q2. Is the agency aware of instances of Canadian sellers marketing and selling ivermectin as a treatment for COVID-19?

At this time, Health Canada has not directly received complaints or reports of adverse events associated with the use of ivermectin-containing products in humans for COVID-19 purposes. (please confirm this is still accurate)

- Not sure why we are using “directly received”, but it seems like this line may have been used before. We have not received and led any complaint on ivermectin related to COVID-19 unless we’re following up on the ivermectin advertising case where MHPD asked for our assistance to verify compliance but that figure would be accounted for in MHPD stats on marketing complaints.

Thank you!

Mimi

Subject: RE: Follow up : For HCPD, MHPD and VDD review: Media Query: Winnipeg Free Press [REDACTED] Regulations of agricultural ivermectin

Hi Celina,

I've added some info into the proposed Q1 response. Thought about indicating it is the MAH's responsibility to ensure their product is marketed as per its TMA or There are no health products authorized for treatment of COVID-19 in Canada., but I took those aspects out to keep it simple.

Thanks!

Mimi

For Q1:

One of Health Canada's roles, as the federal regulator, is the approval of veterinary drug products. The Department helps ensure that all veterinary drugs fully satisfy requirements under the *Food and Drug Regulations* before they can be marketed in Canada and that the marketing of authorized veterinary drugs is consistent with its terms of market authorization and federal legislation. Depending on the province or territory where the drugs are sold, there may be restrictions on who is permitted to purchase products intended for use in livestock. Health Canada does not have jurisdiction over how a product is ultimately used.

Following reports of the use of veterinary ivermectin drugs outside of approved directions for use (off-label use), Health Canada issued a public advisory to inform Canadians that Ivermectin is not authorized to prevent or treat COVID-19 and may pose serious health risks:

Importance: High

Hi Celina

ADMO has come back with comments on this media response. VDD addressed those pertaining to them. The 1st yellow highlighted comment in the 1st para is outstanding. I couldn't find any standard lines to address that one, could you add please. :

Q1. Does Health Canada have any power to make sure agricultural ivermectin isn't being sold for anything other than its intended use?

One of ~~The role of~~ Health Canada's roles, as the federal regulator, is the approval of veterinary drug products. [should also say something here about HC's role re: compliance and enforcement to ensure that regulated products are not being advertised or sold for indications that are not authorized] The Department helps ensure that all veterinary drugs fully satisfy requirements under the *Food and Drug Regulations* before they can be marketed in Canada. ~~Restrictions associated with the sale of a product intended for use in livestock would be of provincial or territorial jurisdiction~~ [please confirm accuracy: isn't any drug subject to FDR and FDA requirements related to advertising and sale? I think we should provide more info here to clarify that HC doesn't have jurisdiction over how a product is ultimately used but we do regulate the sale and advertising of drugs and take action when a product is being advertised or sold outside the terms of its market authorization]. Depending on the province or territory where the drugs are sold, there may be restrictions on who is permitted to purchase products intended for use in livestock. ~~Health Canada does not have jurisdiction over how a product is ultimately used.~~

Following reports of the use of veterinary ivermectin drugs outside of approved directions for use (off-label use), Health Canada issued a public advisory to inform Canadians that Ivermectin is not authorized to prevent or treat COVID-19 and may pose serious health risks:
<https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>

Q2. Is the agency aware of instances of Canadian sellers marketing and selling ivermectin as a treatment for COVID-19?

Health Canada became aware of advertising of Ivermectin for the treatment of COVID-19 in Manitoba this past summer. Upon Health Canada's request, the sponsor of these ads removed them

immediately, confirmed that these ads were no longer being disseminated and committed to refraining from engaging in this non-compliant act in the future. [I think we can expect the reporter to ask for more details regarding this case, including who the sponsor of the ad was. Is there any reason why we can't provide this info proactively? Will the case be published in the online list of advertising complaints? **MHPD to add the details they have**]

When Health Canada identifies or is notified of potential non-compliance with the *Food and Drugs Act* or its Regulations, it takes steps to verify that non-compliance has occurred. Incidents of non-compliance are prioritised and action is taken based on the risk they may pose to the general public. It is the responsibility of companies to comply with regulatory requirements and to investigate incidents of potential non-compliance, ~~and to~~ take appropriate action to correct non-compliance, mitigate any risk to health, and inform Health Canada as appropriate.

To report marketing that is false or misleading or does not meeting regulatory requirements, visit <https://www.canada.ca/en/health-canada/services/drugs-health-products/marketing-drugs-devices/illegal-marketing/complaint.html>.

As part of its ongoing commitment to openness and transparency, Health Canada posts a [summary of health product advertising complaints](#) as well as [Health product advertising incidents related to COVID-19](#) addressed by the Department. [Can we also include the link to the summary of advertising complaints specific to COVID-19? **DONE**]

-

Thanks,
Salima

Questions and answers:

Q1. Does Health Canada have any power to make sure agricultural ivermectin isn't being sold for anything other than its intended use?

One of ~~The role of~~ Health Canada's roles, as the federal regulator, is the approval of veterinary drug products. [should also say something here about HC's role re: compliance and enforcement to ensure that regulated products are not being advertised or sold for indications that are not authorized] The Department helps ensure that all veterinary drugs fully satisfy requirements under the *Food and Drug Regulations* before they can be marketed in Canada. Restrictions associated with the sale of a product intended for use in livestock would be of provincial or territorial jurisdiction [please confirm accuracy. Isn't any drug subject to FDR and FDA requirements related to advertising and sale? I think we should provide more info here to clarify that HC doesn't have jurisdiction over how a product is ultimately used but we do regulate the sale and advertising of drugs and take action when a product is being advertised or sold outside the terms of its market authorization]. Depending on the province or territory where the drugs are sold, there may be restrictions on who is permitted to purchase products intended for use in livestock-

Following reports of the use of veterinary ivermectin drugs outside of approved directions for use (off-label use), Health Canada issued a public advisory to inform Canadians that Ivermectin is not authorized to prevent or treat COVID-19 and may pose serious health risks:
<https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>

Q2. Is the agency aware of instances of Canadian sellers marketing and selling ivermectin as a treatment for COVID-19?

Health Canada became aware of advertising of Ivermectin for the treatment of COVID-19 in Manitoba this past summer. Upon Health Canada's request, the sponsor of these ads removed them immediately, confirmed that these ads were no longer being disseminated and committed to refraining from engaging in this non-compliant act in the future. [I think we can expect the reporter to ask for more details regarding this case, including who the sponsor of the ad was. Is there any reason why we can't provide this info proactively? Will the case be published in the online list of advertising complaints?]

When Health Canada identifies or is notified of potential non-compliance with the *Food and Drugs Act* or its Regulations, it takes steps to verify that non-compliance has occurred. Incidents of non-compliance are prioritised and action is taken based on the risk they may pose to the general public. It is the responsibility of companies to comply with regulatory requirements and to investigate incidents of potential non-compliance, and to take appropriate action to correct non-compliance, mitigate any risk to health, and inform Health Canada as appropriate.

To report marketing that is false or misleading or does not meeting regulatory requirements, visit <https://www.canada.ca/en/health-canada/services/drugs-health-products/marketing-drugs-devices/illegal-marketing/complaint.html>.

As part of its ongoing commitment to openness and transparency, Health Canada posts a [summary of health product advertising complaints](#) addressed by the Department. [Can we also include the link to the summary of advertising complaints specific to COVID-19?]

Subject: RE: For action - FW: Ivermectin - change in status to over the counter?

Hey Philippe,

Sincerest apologies for the delay in getting back on this. I've gone and ahead and put together a proposed reply in the attached word doc covering ivermectin, cetirizine, and famotidine. For cetirizine and famotidine, the response is more or less the standard replies we've been sending for these. For ivermectin, I added in a new para (borrowing heavily from your proposed wording below) speaking to the OTC point. The ivermectin situation is really complicated so being clear, accurate, and **concise** is quite a challenge 😊

Hopefully this is more or less OK and you don't have to put too much more time/effort into it. The person writing to us seems to be knowledgeable on healthcare/drugs so I used slightly more advanced language than I typically would.

Thanks for your patience,
Martin

Ok sounds good Martin,
Here's the standard direct response that we've been using, in case it helps put together the response for this one – would you be able to also include short references to the two other products mentioned in the incoming (e.g. no submissions, and no CT's filed),
Thank you so much,
P

Hi Phillipe, no problem, we'll get back to you shortly with some lines on the risks ☺

No objections to the statement you've put together below, I think that works, but I'm wondering if maybe rather than saying this piece:

"...while the benefits have not been demonstrated via robust clinical trials, therefore it would be inappropriate to remove this product from the Prescription Drug List..."

It's better to just mention our concerns about the risk/benefit and then mention that manufacturers/sponsors are welcome to file an application to obtain a COVID-19 indication, as well as Rx to OTC status switch, supported by evidence that the drug's benefits outweigh the risks in a self-care environment and we'll be happy to review it and make a decision. Let me proposed some better wording when I follow up, those are just some quick thoughts.

██████████ we'll get dragged into an endless debate on the merits of the various ivermectin studies out there in the ether, none of which we've properly reviewed the way we would in the context of a market auth. decision (eg. explaining what an open-label study is and why it's not sufficient, statistical significance of efficacy endpoints, unvalidated efficacy endpoints, concomitant use with other meds, etc)... we don't really have the capacity to start doing that nor do we have access to the full data sets anyway ☺

Will follow up with you shortly, sorry for the long message!

Thanks,
Martin

Hey there folks,

So on this correspondence suggesting that we remove the prescription status on ivermectin – DGO can respond to the incoming,
However could I just ask for a short paragraph from BGIVD on the risks associated with this drug, so that we can respond along the lines of "you assert that the benefit of preventing COVID outweigh the

risks of using this medication, however, the risks are well categorized and are XXX, while the benefits have not been demonstrated via robust clinical trials, therefore it would be inappropriate to remove this product from the Prescription Drug List – however, doctors can still prescribe off-label.”

How does that sound?

P

Subject: Ivermectin - change in status to over the counter?

Hello,

There seems to be evidence that the medication ivermectin is effective against SARS-CoV-2.

Since ivermectin is an authorized product, but currently prescription status, is the Department of Health considering making this available on a non-prescription basis, such that consumers can access it and use it early on in the disease progression, especially as hospitals are reaching critical levels.

I would appreciate if you could please further investigate this possibility, since at this point, off label use with a benefit of preventing Covid deaths would likely outweigh the risks associated with using the medication.

My understanding is that there is also evidence in the literature that cetirizine and famotidine also help prevent the cytokine storm from taking place. These are at least available over the counter, however public education could be useful in this instance to prevent hospitalizations.

Thank you very much for taking these suggestions into serious consideration.

[REDACTED] Use of Ivermectin to treat COVID-19 + incident report

Hi Toufic,

The PA changed quite a bit after we supplied the Director approved version. The posted PA has this phrasing "Health Canada has received concerning reports of the use of veterinary ivermectin to prevent or treat COVID-19." that was not provided nor approved by HPCRM. My guess is that it could be in reference to the US patients (although that specifically is referenced later on). Regardless, our program would not need to open cases for follow-up as this would be off-label use and could be data with MHPD / VDD.

Thanks!

Importance: High

Hi HPCRM,

Media request due COB today (I just rec'd it, but it was due yesterday 5pm):

ATIA-14(a)

ATIA - 19(1)

Q1. I'm writing about ivermectin and its rise in popularity as a COVID-19 treatment despite it being unauthorized for such use. The advisory posted last week notes that Health Canada has received reports of people using ivermectin for COVID-19 purposes; does Health Canada have numbers on how many reports have been made and where these reports are coming from?

MHPD input for your consideration:

Ivermectin is an antiparasitic agent approved for use in humans and animals. There are concerns about consumers purchasing veterinary Ivermectin to prevent or treat COVID-19. On August 31, 2021, Health Canada published a Public Advisory (<https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>) informing the public that Ivermectin is not authorized to prevent or treat COVID-19 and using it for such purposes can cause serious health problems. This advisory noted that the Department has received concerning reports of the use of veterinary ivermectin to prevent or treat COVID-19. This is in reference to reports of patients in the U.S. as stated in the advisory. (**CPAB**, please check with VDD/ROEB to confirm)

At this time, Health Canada has not received reports of adverse events associated with the use of ivermectin-containing products in humans for COVID-19 purposes.

I have not searched the HPCD Media Responses database for previous responses (but did cc Katie for help, Lyrique is out of the office), nor do I have previous media responses, but I do have drafts of the PA if helpful.

If ready between 2-4pm, I'll be out of the office, please send director-approved response to Jon to seek DG approval

Subject: RE: For ROEB-HPCD input: Media Query: Toronto Star [REDACTED] Use of Ivermectin to treat COVID-19 + incident report

Hi ROEB colleagues,

Just following up on the request below.

MHPD submitted this language to incorporate in your response:

Ivermectin is an antiparasitic agent approved for use in humans and animals. There are concerns about consumers purchasing veterinary Ivermectin to prevent or treat COVID-19. On August 31, 2021, Health Canada published a Public Advisory (<https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>) informing the public that Ivermectin is not authorized to prevent or treat COVID-19 and using it for such purposes can cause serious health problems. This advisory noted that the Department has received concerning reports of the use of veterinary ivermectin to prevent or treat COVID-19. This is in reference to reports of patients in the U.S. as stated in the advisory. (**CPAB**, please check with VDD/ROEB to confirm)

At this time, Health Canada has not received reports of adverse events associated with the use of ivermectin-containing products in humans for COVID-19 purposes. (**Internal note:** the information received by HC from the poison control centres cannot be publicly disclosed without their approval, which we don't have at this time and their data is in preliminary format)

Any guidance you can provide would be greatly appreciated!

Anne

Hi Dayna,

We do not have any evidence that Ivermectin is being used for the treatment of Covid, and we do not have any evidence that HC is considering its usage. I passed the question around as well to our coordinators and they came up with the same conclusion.

There is however research or rather a report that has been done on the provincial level (Rapid Evidence Report Ivermectin in the Treatment and Prevention of COVID-19) , not sure if can direct the person there but it is specific to Alberta?

Thoughts?

Subject: Ivermectin

Hello,

I am a Canadian citizen. I have been listening to top researchers, doctors, geneticists worldwide. There is a cheap, safe and effective drug used worldwide at the moment called ivermectin. It is being used as a prophylactic and treatment for COVID. I do not trust these so called vaccines; in fact it is not a vaccine in the true sense of the word. I think our government needs to make this drug available to the public. Countless Canadians are sick and dying. The government has put all its eggs in one basket. Or are the people at the top in cahoots with the big pharmaceutical companies? Ethically, you need to make this drug available.

Subject: RE: For director approval: Due @ 1 today: For HPCD input: Media Query: Winnipeg Free Press [REDACTED] Regulations of agricultural ivermectin

Hi Celina,

We have not received any complaints for ivermectin related to COVID-19 but are aware that MHPD received multiple complaints for non-compliant advertising of ivermectin for treatment of COVID-19.

We could incorporate these standard lines into their response:

When Health Canada identifies or is notified of potential non-compliance with the *Food and Drugs Act* and/or its Regulations, it takes steps to verify that non-compliance has occurred. Incidents of non-compliance are prioritised and action is taken based on the risk they may pose to the general public. It is the responsibility of companies to investigate incidents of potential non-compliance and to take appropriate action to correct non-compliance, mitigate any risk to health, and inform Health Canada as appropriate.

[MHPD to add their stats and actions]

If you have any information regarding the potential non-compliant sale /advertising of ivermectin, or any other health product, you are encouraged to report this information using the following online complaint form: <http://healthycanadians.gc.ca/apps/radar/MD-IM-0005.08.html>

As part of its ongoing commitment to openness and transparency, Health Canada posts a [summary of health product advertising complaints](#) addressed by the Department.

Let me know if you need anything else,

Thanks!

Mimi

[REDACTED] Regulations of agricultural ivermectin

Hi Toufic,

Some background preamble to provide you with context. Team effort on this one.

We understand is that Ivermectin veterinary drugs are OTC (according to DPD) and available as oral pastes, syrups, topicals and subcutaneous injectables. As far as we know, a consumer could buy them off the shelf without any oversight. VDD might be able to clarify this as the products may only be available through vet offices; some online sources say a prescription is required.

Two Ivermectin products are licensed for human use including a topical and a tablet, physician oversight would be required for these as they are listed as prescription drugs.

For Q1, we hope that VDD takes the lead as it seems to relate to the licensing/classification aspect of ivermectin for veterinary use.

Q1. Does Health Canada have any power to make sure agricultural ivermectin isn't being sold for anything other than its intended use?

A1. HPCD input:

While Health Canada oversees the regulation of drugs, it has no jurisdiction over how health care professionals prescribe drugs once they are approved nor how consumers choose to consume the drug outside of approved directions for use (off-label use).

While Health Canada does not regulate off-label use by consumers, following reports of the use of veterinary ivermectin drugs to prevent or treat COVID-19, Health Canada issued a public advisory to inform Canadians that Ivermectin is not authorized to prevent or treat COVID-19 and may pose serious health risks: <https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>

Q2. Is the agency aware of instances of Canadian sellers marketing and selling ivermectin as a treatment for COVID-19?

MHPD to provide answer.

Thanks,
Celina

Importance: High

Hi Celina

Media request for response please. DGO has requested an extension but hasn't heard back yet, so (for now) a response is requested back by 1 pm today. I've added our previous response in red to Q2 below and also asked that MHPD be tasked for Q2.

Deadline to reporter: September 22 / 5 pm

Impact: MEDIUM (2)

Complexity: MEDIUM (2)

Background: X

Questions and answers:

Q1. Does Health Canada have any power to make sure agricultural ivermectin isn't being sold for anything other than its intended use?

Q2. Is the agency aware of instances of Canadian sellers marketing and selling ivermectin as a treatment for COVID-19?

At this time, Health Canada has not directly received complaints or reports of adverse events associated with the use of ivermectin-containing products in humans for COVID-19 purposes. (please confirm this is still accurate)

Thanks,
Salima

Good morning,

We have received a media query on agricultural ivermectin. Initially, this query was sent to CFIA but they confirmed that HC may have a role to play.

Can you take a look at the request below and advise whether your team can provide input?

If so, your input by 1 pm would be greatly appreciated.

Thank you,

Anne

Subject: For Director's office: update on Ivermectin signage in MB

Hi Toufic,

Update on Ivermectin Signage:

- At the end of August, MHPD received a complaint [REDACTED] regarding a billboard advertising Ivermectin treating COVID in Manitoba.
- MHPD contacted the sign company and have received confirmation that the signs have been removed.
- A Public Advisory has been posted warning Canadians that Ivermectin is not authorized to prevent or treat COVID-19 (<https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>)

MHPD has requested that ROEB drives to the location of the signage (Wrinkler, Manitoba) to further confirm that it has indeed been removed, however I do not think this is necessary given that the signage company has confirmed the signs have been removed.

Please let us know if there is any concerns.

Thanks,
Celina

Subject: FW: Response received Re: File# 3013457 Correspondence from the Marketed Health Products Directorate_Magnetsigns

Hi Celina,

Received the email below from Alain (MHPD STARS) regarding a complaint [REDACTED] they received for billboards advertising Ivermectin treating COVID in Manitoba. MHPD contacted the sign company and have received confirmation that the signs have been removed, however, MHPD is now requesting that ROEB drive to the location of where the sign was posted to confirm it has indeed been removed.

Based on the company's confirmation, I'm not sure it is necessary to send an inspector out to confirm, however, I understand there are some sensitivities regarding this product. I did speak with Ian and he said they could drive out to the location if required, however, we wanted to check in with management on the expectation of ROEB confirming compliance that was requested by MHPD.

I've also attached a previous thread that was briefed up for additional context.

Please let me know if you'd like to discuss.

Thanks,
Dayna

Subject: For Director's Office Approval- Action (ASAP please): For ROEB-HPCD input: Media Query: Toronto Star [REDACTED] Use of Ivermectin to treat COVID-19 + incident report (September 9, 2021)

Hi Salima,

The PA changed quite a bit after we supplied the Director approved version. The posted PA has this phrasing "Health Canada has received concerning reports of the use of veterinary ivermectin to prevent or treat COVID-19." This statement was not provided nor approved by HPCRM. Our guess is that it could be in reference to the US patients (although that specifically is referenced later on) and various media reports. Regardless, our program would not need to open cases for follow-up as this would be off-label use and could be data driven from MHPD (ARs) / VDD etc.

Just to be sure, CTU did a quick scan on ivermectin cases in RADAR. We only identify 1 case (2021-054946) related to a physician importing ivermectin. During follow up with physician he confirmed it was being prescribed for intended use and not COVID-19.

Hope this helps address the question below. Let us know if you have any questions and/or concerns.

Cheers,

Toufic

Subject: FW: For ROEB-HPCD input: Media Query: Toronto Star [REDACTED] Use of Ivermectin to treat COVID-19 + incident report

Importance: High

Hi HPCRM,

Media request due COB today (I just rec'd it, but it was due yesterday 5pm):

Q1. I'm writing about ivermectin and its rise in popularity as a COVID-19 treatment despite it being unauthorized for such use. The advisory posted last week notes that Health Canada has

ATIA-14(a)

ATIA - 19(1)

received reports of people using ivermectin for COVID-19 purposes; does Health Canada have numbers on how many reports have been made and where these reports are coming from?

MHPD input for your consideration:

Ivermectin is an antiparasitic agent approved for use in humans and animals. There are concerns about consumers purchasing veterinary Ivermectin to prevent or treat COVID-19. On August 31, 2021, Health Canada published a Public Advisory (<https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>) informing the public that Ivermectin is not authorized to prevent or treat COVID-19 and using it for such purposes can cause serious health problems. This advisory noted that the Department has received concerning reports of the use of veterinary ivermectin to prevent or treat COVID-19. This is in reference to reports of patients in the U.S. as stated in the advisory. (**CPAB**, please check with VDD/ROEB to confirm)

At this time, Health Canada has not received reports of adverse events associated with the use of ivermectin-containing products in humans for COVID-19 purposes.

I have not searched the HPCD Media Responses database for previous responses (but did cc Katie for help, Lyrique is out of the office), nor do I have previous media responses, but I do have drafts of the PA if helpful.

If ready between 2-4pm, I'll be out of the office, please send director-approved response to Jon to seek DG approval

Subject: For ROEB-HPCD input: Media Query: Toronto Star ([REDACTED]) Use of Ivermectin to treat COVID-19 + incident report

Good day ROEB-HPCD team,

We have received a media query asking the # of reports received on the use of ivermectin to treat COVID-19 (as stated in the recall last week Ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems - Recalls and safety alerts (healthycanadians.gc.ca))

Is this information we can provide to the reporter? Note the tight deadline (5 pm today)– I will manage the reporter's expectations. I checked with HPFB and they mentioned that your team initiated the PA – therefore could possibly help me out.

Your input would be greatly appreciated.

Thank you.

Anne

[REDACTED] Use of Ivermectin to treat COVID-19 + incident report

Hey Bruce,

Yes agreed, we haven't seen anything about actual reports of use, but honestly I wouldn't know if MHPD would have this either. The advisory mentioned people using the veterinary ivermectin, and that was in reference to those news articles... I can send this info back to CPAB?

P

Q1. I'm writing about ivermectin and its rise in popularity as a COVID-19 treatment despite it being unauthorized for such use. The advisory posted last week notes that Health Canada has received reports of people using ivermectin for COVID-19 purposes; does Health Canada have numbers on how many reports have been made and where these reports are coming from?

Subject: For HPFB-TBD input: Media Query: Toronto Star [REDACTED] Use of Ivermectin to treat COVID-19 + incident report

Good day HPFB,

We have received a media query asking the # of reports received on the use of ivermectin to treat COVID-19 (as stated in the recall last week ivermectin not authorized to prevent or treat COVID-19; may cause serious health problems - Recalls and safety alerts (healthycanadians.gc.ca))

Is this information we can provide to the reporter? Note the tight deadline (2 pm today)– I will manage the reporter's expectations.

Your input would be greatly appreciated.

Thank you.

Hi there Anne,

TPD has no reports of ivermectin use – maybe MHPD has these? However, I believe the “reports” mentioned in the advisory, with regards to veterinary ivermectin use, were media reports, i.e. news articles.

Use of Ivermectin to treat COVID-19 + incident report

Hi Jenny,

Just to note that our response will cover **complaints** (recommended below) and reports of AEs – for both, there have been **none received**.

This does not conflict with the PA, as the statement reads “This advisory noted that the Department has received concerning reports of the use of veterinary ivermectin to prevent or treat COVID-19” [emphasis is mine]

You’ll see the response shortly, as I’m sending DG approved lines up now.

Thanks Rosalee.

For this one, in addition to any international media reports of the use of this drug to treat COVID-19, we may wish to include the number of complaints we have received as that could be considered a “report” by some people. If the complaints are all active cases we could simply indicate that we are following up and will take action and update Canadians if needed.

For your consideration.

Hi, adding Jonathan and Rosalee in DGO as I don't think they're captured in the DGO email. Carole is away (her out of office message was lost in the email migration).

Hopefully they know who in HPCD worked on the ivermectin advisory who can confirm where the reports reference in the lead para came from. My guess is MHPD has it right.

cheers

Laura

Subject: RE: For ROEB-HPCD input: Media Query: Toronto Star [REDACTED] Use of Ivermectin to treat COVID-19 + incident report

Hi ROEB colleagues,

Just following up on the request below.

MHPD submitted this language to incorporate in your response:

Ivermectin is an antiparasitic agent approved for use in humans and animals. There are concerns about consumers purchasing veterinary Ivermectin to prevent or treat COVID-19. On August 31, 2021, Health Canada published a Public Advisory (<https://healthycanadians.gc.ca/recall-alert-rappel-avis/hc-sc/2021/76365a-eng.php>) informing the public that Ivermectin is not authorized to prevent or treat COVID-19 and using it for such purposes can cause serious health problems. This advisory noted that the Department has received concerning reports of the use of veterinary ivermectin to prevent or treat COVID-19. This is in reference to reports of patients in the U.S. as stated in the advisory. (**CPAB**, please check with VDD/ROEB to confirm)

At this time, Health Canada has not received reports of adverse events associated with the use of ivermectin-containing products in humans for COVID-19 purposes. (**Internal**

[REDACTED]

Any guidance you can provide would be greatly appreciated!

Hi Thivya,

Attached is the ADM approved version of the PA for Ivermectin.

Can you confirm there are no objections with the following addition (I believe it aligns with our update yesterday, that MHPD would be issuing a regulatory letter to the advertiser)

Health Canada will continue to monitor the situation and will take appropriate and timely action should new information become available, including any information regarding the illegal advertising or sale of ivermectin. Health Canada will also communicate any new safety information to healthcare professionals and consumers.

Subject: For URGENT ADM Approval: PA | Ivermectin

Good morning Stefania, Pam, and HPFB ADMO,

Please find attached an advisory for your approval by 11am, if possible.

Apologies for the rush, we are aiming to post today.

Merci!
Alexandre

Context: In response to a growing interest in the unauthorized use of ivermectin to prevent or treat COVID-19, Health Canada is advising Canadians to stop self-administering this drug. There is no evidence that ivermectin (veterinary or human version) is safe and effective against COVID-19. There are reports that people are purchasing the veterinary version of this product, which can be dangerous for humans and may cause serious health issues.

Hi Erika,

Thanks for reaching out, and for the status update!

Yes Evelyn Soo, cc'ed here and Director of our Bureau of Gastroenterology, Infectious and Viral Diseases would be interested in helping review,

We'll do our best with the sort turnaround (without knowing the size of the doc...) – if she could receive it today that would greatly help,

Thanks again!

One question I have – I realize the draft is not for wider dissemination at this point, but is it ok to make it known that PHAC is working on this and anticipating a release sometime in the coming weeks?

Cheers, and thank you for your involvement!
P

Subject: RE: FYI - Ivermectin info from June 3

Afternoon Philippe;

Lisa Waddell has completed the requested Ivermectin review!

As part of our review/approvals process we seek 'expert' review of these drafts to provide any necessary nuances, and flag any policy concerns. Traditionally we seek this input from PHAC Medical Advisors, and are wondering if you would have a suggested contact from HC that would be well suited to review and provide comment?

If possible we would hope for quick turn-around by EOD tomorrow, so that modifications can be made Friday morning.

Final reviews are then routed through Dr. Pascal Michel, the PHAC Chief Science Officer for approval prior to distribution to PHAC, HC, SAC/TAC partners Friday afternoon. Note that following this distribution the reviews undergo additional internal PHAC review prior to being approved for Public release – so we would ask this not be shared externally until we advise (likely end of next week). Note also we will translate the review, although that will take a few weeks to complete!

Please provide the name/contact of a recommended reviewer so that we can reach out with the draft. Alternately, please let us know if we should route this through our internal reviewers.

Regards;

Erika

Subject: RE: FYI - Ivermectin info from June 3

Thanks Philippe – always nice to have a few sunny days off; hope you got to enjoy as well.

Unfortunately due to the short week, and more complicated nature of this review than originally anticipated, we were not able to complete it last week as planned! I've been assured it will be available by the end of the week, and am trying to see if an early draft can be shared with you for reference. I'll share updates as soon as possible.

Thanks for the details on new reviews below – I've passed them along should it be possible to include them, or at least confirm there is no conflicting evidence detailed.

Subject: RE: FYI - Ivermectin info from June 3

Hey there Lisa, hope you had a great weekend,

Just wondering how the review related to ivermectin is going? Just got wind of a couple of newly published meta-analyses...

[Ivermectin for the treatment of COVID-19: A systematic review and meta-analysis of randomized controlled trials | Clinical Infectious Diseases | Oxford Academic \(oup.com\)](#)
